Flowranges and configurations

Configuration 1. – Conservative configuration with flow conditioner
Configuration 2. – Recommended configuration with flow conditioner
Configuration 3. – Recommended configuration without flow conditioner

For bi-directional flow; The upstream piping spools and flow conditioner as applicable from configurations 1, 2 and 3 can be used on both ends of the metering package. Any thermowell should be positioned 3 – 5 diameters away from meter flanges.

*Actual flowrange may vary depending on application*
